Summary

Passionate software engineer that started programming as a hobby while being a teenager and then turned this hobby into a job. Working with Mobile technologies since 2014.

My commercial experience involves working with big financial corporations as well as small IoT startups. I've built projects from scratch as a single developer but also worked on bigger projects cooperating with a big team of engineers. Besides being an engineer I enjoy the business side of the industry. Not afraid of taking ownership - I can manage a team and make it thrive. Constantly looking for new and interesting things to learn and share.

Additional

- Blogposts and open source work featured in iOS Dev Weekly and iOS Goodies newsletters
- 1st place in Nordic Semiconductor Student Contest
- Attendant of many meetups and conferences
