Summary

- Experienced engineer that learned his craft from best world engineers at companies like Babylon Health, HSBC or Novoda
- Truly passionate person, programming has been my hobby since teenage years which led to exposure to multiple technologies
- Engineer who can build your new feature quickly and is not afraid of taking ownership. If there's business value, I see no problem in working 12 hours a day to allow you to be first in the market (not constantly of course)
- I can write code that's easy to read, maintain and fully testable
- I can lead your team and get the most out of it without burning out people or just be good and helpful team player
- I follow the newest community approaches but at the same time take pragmatic decisions in implementing them
- I take business value over perfection
- Broad access to my connections from multiple companies, I can build your mobile team when needed
- 1 week free in case you're not happy with my services

Additional

- Blogposts and open source work featured in iOS Dev Weekly and iOS Goodies newsletters
- 1st place in Nordic Semiconductor Student Contest
- Attendant of many meetups and conferences
